

KALLOL ROY

Solution Architect | Technical Lead

Dhaka, Bangladesh | Mobile: (+88) 01621905783 | Email: meetkallolroy@gmail.com

PROFESSIONAL SUMMARY

Solution-focused Technical Lead / Solution Architect with 13+ years of experience designing, modernizing, and operating scalable enterprise applications across financial, web, and integration platforms. Strong fit for Lead Digital Financial Services roles requiring DFS leadership, system operations, vendor transition, DevOps, application ownership, performance monitoring, cybersecurity collaboration, and stakeholder management across business and IT teams. Experienced in .NET, Java/Spring Boot, React/Angular, REST APIs, SQL/Oracle/PostgreSQL, cloud platforms, CI/CD, Docker, and microservices/event-driven architecture.

CORE SKILLS & EXPERTISE

- DFS leadership: capable of defining technology roadmaps, application ownership models, operational governance, and long-term platform enhancement plans.
- Vendor transition and application ownership: experienced in taking ownership of externally developed applications, understanding source code, documenting architecture, and building internal maintenance capability.
- Digital operations support: strong background in production support, incident analysis, root-cause resolution, availability improvement, and L1/L2 support process coordination.
- DevOps and monitoring: hands-on experience with CI/CD, Docker, Azure/AWS, release governance, environment management, application monitoring, and performance optimization.
- Cybersecurity and risk: familiar with secure API design, JWT/Spring Security, role-based access, vulnerability remediation coordination, and security-by-design practices.
- Collaboration: proven ability to work with product owners, engineering managers, vendors, country teams, business stakeholders, and senior leadership to align digital solutions with operational needs.

CORE SKILLS & EXPERTISE

- Digital Financial Services & Operations: DFS platform ownership, mobile/web application support, core system integration, service availability, incident management, operational KPIs, SLA tracking.
- Solution Architecture: microservices, event-driven architecture, API-led integration, monolith-to-microservices migration, DDD, architecture roadmap, ARB/design review, ADR documentation.
- Backend & Platforms: .NET 8, ASP.NET Core, Web API, C#, Java, Spring Boot, Node.js, RESTful APIs, JWT/Spring Security.
- Frontend: ReactJS, Angular 15+, JavaScript, Bootstrap, jQuery, responsive UI design.
- Cloud & DevOps: Microsoft Azure, AWS, Docker, CI/CD, Jenkins, Terraform/CloudFormation fundamentals, deployment automation, monitoring and alerting practices.
- Data & Integration: SQL Server, Oracle, PostgreSQL, MySQL, MongoDB, Redis, data modeling, stored procedures, API integration, performance tuning.
- Leadership: team mentoring, technical governance, code review, vendor coordination, documentation standards, cross-functional communication, delivery planning.

PROFESSIONAL EXPERIENCE

Tech Lead / Solution Architect | EY (Ernst & Young) | Dhaka, Bangladesh

Jan 2022 – Present

- Lead end-to-end solution architecture and technical design for enterprise-grade applications, ensuring scalability, maintainability, security, and performance.

- Drive DFS-aligned platform strategy including application ownership, operational governance, service reliability, release readiness, and long-term enhancement roadmap.
- Support vendor transition activities by reviewing externally developed application source code, documenting architecture, identifying technical gaps, and building internal support and maintenance capability.
- Translate business, operational, and regulatory requirements into robust architectures aligned with enterprise standards and delivery governance.
- Define technical standards, perform architecture/design reviews, and guide engineering teams on implementation patterns, integration approaches, and production readiness.
- Provide hands-on leadership using .NET 8, ASP.NET Core, Web API, microservices, Azure, Docker, SQL Server, and CI/CD practices.
- Implement DevOps practices including automated build/release pipelines, environment governance, deployment planning, release rollback planning, and continuous improvement.
- Establish monitoring and operational practices for performance, availability, incident triage, root-cause analysis, SLA/KPI tracking, and rapid issue resolution.
- Collaborate with security/SOC stakeholders on secure API design, access control, vulnerability remediation, risk mitigation, and compliance-driven technical improvements.
- Collaborate with product owners, engineering managers, client stakeholders, vendors, and delivery teams to align technical solutions with business outcomes and budgets.
- Mentor engineers, manage code reviews, improve maintainability, and promote secure coding, reusable components, and documentation discipline.
- Design and optimize databases and integration layers using SQL Server/MySQL/PostgreSQL, improving query performance and operational reliability.

Lead Developer | Ixora Solution Ltd. | Dhaka, Bangladesh

May 2017 – Jan 2022

- Led application development and support activities across web and mobile-facing systems, ensuring reliable delivery, maintainability, and business continuity.
- Coordinated with project managers and CTO to improve technical documentation, delivery standards, implementation planning, and operational support processes.
- Designed and developed frontend components using ReactJS, Angular, Node.js, JavaScript, Bootstrap, and responsive UI practices.
- Implemented APIs using .net/Java Spring Boot and integrated backend services with Android and web clients, supporting secure and scalable service communication.
- Contributed to application ownership by analyzing existing codebases, enhancing modules, resolving production issues, and supporting long-term maintenance.
- Supported DevOps-oriented delivery by coordinating deployments, troubleshooting environment issues, improving release quality, and supporting automated build/release practices.
- Worked on monitoring, debugging, performance tuning, incident resolution, and support coordination for business-critical applications.
- Worked as a core developer across application layers, contributing to analysis, design, implementation, troubleshooting, and production support.
- Managed code review processes, refactored complex modules, and provided technical solutions to team members as a problem solver.
- Collaborated with business users, technical teams, and stakeholders to align application functionality with operational needs and user expectations.

Principal System Developer | GraphicPeople / SoftwarePeople | Dhaka, Bangladesh

Jan 2016 – Apr 2017

- Worked as a core developer across backend, integration, and application layers for enterprise software projects.

- Developed, deployed, maintained, debugged, and enhanced Java Spring Boot applications secured with Spring Security and JWT.
- Managed code reviews to ensure quality delivery and promoted development best practices within the team.
- Provided technical solutions for complex implementation issues and supported scheduled automation/robot processes.

Senior Software Engineer | HawarIT Limited | Dhaka, Bangladesh

Nov 2012 – Dec 2015

- Performed requirement analysis, project planning, and n-tier software architecture design according to business requirements.
- Developed production-level code and critical software modules for European client projects.
- Built web-based applications using Java, JPA, .NET/C#, ASP.NET, JavaScript, ExtJS, CanJS, jQuery, Web API, Autodesk MapGuide Toolkit, and PostgreSQL.
- Designed databases, wrote SQL queries, stored procedures, and views using SQL Server and PostgreSQL.

Software Engineer | Brain Station 23 Ltd. | Dhaka, Bangladesh

Feb 2010 – Oct 2012

- Analyzed requirements using UML and designed n-tier software architecture based on project needs.
- Developed production-level code and critical application modules using Java Servlets, JSP, and C#/.NET.
- Conducted R&D on complex technical requirements and contributed to delivery of web-based software solutions.

SELECTED ACHIEVEMENTS & STRENGTHS

- 13+ years of hands-on engineering and leadership experience from software engineer to solution architect/technical lead.
- Strong capability to bridge business requirements and technical delivery across architecture, development, DevOps, database, and support functions.
- Experienced in leading teams, mentoring developers, performing code reviews, and improving software quality and maintainability.
- Strong communication skills for working with business users, vendors, product teams, management, and distributed technical teams.

EDUCATION

Bachelor of Computer Science — University of Pune, Pune, India
